Vishnu Putta

Applied AI @Carelon | MLOps | Data Engineer Ld | Aws | Gcp |
Azure | Snowflake
Dallas-Fort Worth Metroplex

Summary

Experienced Applied AI and Data Engineering professional with a strong track record of designing and deploying real-world, intelligent systems. Skilled in integrating machine learning models into scalable pipelines, orchestrating ML workflows, and building robust data platforms across cloud environments. Adept at bridging the gap between research and production, delivering AI solutions that drive measurable impact. Passionate about solving complex challenges and creating end-to-end systems that translate advanced AI into business value.

Experience

Carelon

3 years

Applied AI

December 2022 - Present (2 years 5 months)

Dallas, Texas, United States

- Post-Call Wrap-Up Automation – Streaming real-time events and using OpenAI for multilingual summarization to streamline agent documentation.
- SmartBot Agent – Built an LLM-based assistant for resolving frontline benefit and claims queries via RAG and API integration.
- Voice-to-Insight – Converted large-scale customer call audio into actionable transcripts and sentiment insights using OpenAI Whisper and Annotate.

Data Science Sol Cons Sr (MLOps/Data Engineer Sr)

May 2022 - December 2022 (8 months)

Dallas, Texas, United States

ML Infrastructure & Feature Store Engineering:

Managed on-prem Kubernetes clusters for ML orchestration and refactored CI/CD pipelines with Jenkins and Docker. Customized Feast SDK (Opensource feature store) to support Snowflake and Apache Spark, and built a Feature Catalogue integrated with Airflow to streamline feature reuse and model deployment.

PA PASS – Prior Authorization Approval Audit Checks Enablement :
Operationalized a machine learning model designed to detect anomalies in Prior Authorization approvals, supporting audit and compliance teams. Built scalable batch pipelines using Apache Spark and Airflow, and managed data flow into Snowflake for traceability and downstream analysis. Integrated model outputs with business logic to flag issues like repeat claims or excessive approvals, and enabled visibility through Tableau dashboards.

Anthem, Inc.

4 years 1 month

Data Science Sol Cons Sr (MLOps/Data Engineer Sr)

April 2021 - May 2022 (1 year 2 months)

Atlanta, Georgia, United States

Smart Utilization Management – Real-Time ML for Prior Authorization:
Designed & Operationalized a real-time ML pipeline using real-time API, Feast SDK for feature stores, and Kubernetes-deployed APIs to predict PA outcomes. Overcame stale data limitations by implementing Spark + Delta Lake for daily UPSERTs, improving model freshness and earning internal recognition for innovation.

Big Data Engineer (Enterprise Data Science)

October 2019 - April 2021 (1 year 7 months)

Atlanta, Georgia, United States

Real-Time Claims Anomaly Detection – Kafka + Spark Streaming
Built a real-time anomaly detection pipeline using Kafka and Spark Structured Streaming (Scala) to identify fraudulent healthcare claims based on duplication, abnormal charge patterns, and provider behavior. Enabled near-instant fraud review and intervention, reducing manual audits and supporting proactive compliance.

Big Data Fabric (BDF) Project – Healthcare Datalake Platform:

Led offshore teams and collaborated with stakeholders to build scalable ingestion pipelines using PySpark, Hive, and StreamSets on Cloudera. Automated ETL workflows across billions of records sourced from Oracle, MySQL, Teradata, FTP, and APIs. Implemented PHI masking and enabled downstream analytics in Tableau and ODW.

Big Data Engineer (Enterprise Data Warehouse)

May 2018 - September 2019 (1 year 5 months)

Atlanta, Georgia

Voyagers Project (Pharmacy Business Manager – now Carelon Rx)

Joined as the first developer on the PBM initiative, designing ingestion frameworks for EFX third-party files. Automated the parsing and transformation of complex XML files into Avro using custom Java code, with final outputs ingested into Hive for analytics and operational use.

Credit Suisse

Data Engineer

June 2017 - April 2018 (11 months)

Morrisville, North Carolina, United States

Built and deployed ML pipelines to assess corporate carbon emissions using ESG data from Sustainalytics and Morningstar. Integrated Scope 1–3 emissions into predictive models and developed Tableau dashboards to support ESG investment decisions and sustainability reporting.

Blue Cross and Blue Shield of Illinois, Montana, New Mexico, Oklahoma & Texas

Big Data Developer

October 2016 - June 2017 (9 months)

Greater Chicago Area

Worked on onboarding and processing healthcare data for the BCBS platform using Cloudera on-prem. Built PIG-based data pipelines to transform EBCDIC-encoded claims data and implemented data quality checks with audit tracking in HBase. Extracted data via Sqoop and ensured operational monitoring using Kibana and Grafana.

Programmed

Software Developer

August 2015 - June 2016 (11 months)

Sydney, Australia

Contributed to building an internal employee scheduling system in Java, supporting shift management for field staff. Developed modules for user authentication, data validation, and conflict checks using JSP/Servlets and MySQL. Worked in an Agile environment, collaborating with senior developers to implement MVC architecture and gaining hands-on experience with Git and team-based development practices.

Impératif Call Centre Partners

Software Engineer Intern

February 2014 - June 2014 (5 months)

Brisbane, Queensland, Australia

Developed Python-based web scrapers using BeautifulSoup and urllib to extract lead data from business directories, streamlining prospect intake for Salesforce via Clicktools integration.

Education

CQUniversity

Master's Degree, Information Technology · (2009 - 2010)

Navitas College of Public Safety

Certificate III, Business · (2011 - 2012)

Jawaharlal Nehru Technological University

Bachelor's Degree, Electrical and Electronics Engineering · (2004 - 2008)
